PROFILE SUMMARY

I consider myself a strategic problem solver who focuses on unblocking creative teams. While studying architecture, I completely taught myself technical art, graphics programming, and pipeline automation. I'm used to diving into the deep end—whether that means building standalone rendering engines from scratch in C++ or setting up unrestricted n8n automations to speed up iteration times. I really enjoy taking complex shader math and explaining it simply to non-technical artists, and I'm always looking to mentor junior staff so the whole team gets stronger technically.

EXPERIENCE

Lead Technical Artist / Pipeline Architect

Freelance & Independent Clients | 2020 - Present

- Streamlined production pipelines for luxury carpentry clients by developing custom 3D generators, shaders, and advanced visualisations.
- Collaborated closely with architects and civil engineers to architect a faster, unified multi-brand workflow.
- Set up logic-driven batch rendering pipelines that automatically swap out materials and cameras for hundreds of meshes.
- Built a custom infinite ocean shader that handles overwater and underwater transitions seamlessly.
- Put together complex mathematical shaders using things like RVT blending, POM, and frustum-culling.
- Wrote my own standalone rendering engine from scratch using C++ and Vulkan.
- Took a massive 50-million polygon photogrammetry scan and baked it down to a 35k asset that runs perfectly in-browser.
- Scripted out procedural generation tools using Python and nodes to completely automate structural modeling tasks.

Architectural Intern / Technical Tool Developer

J7 | 2025 - 2026

- Expanded the functionality of existing CAD software (Vectorworks) by developing complex scripts for demolition maps, custom Voronoi pattern creation, and automated reporting.
- Stepped up as a technical mentor within the team, actively teaching coworkers advanced mechanics and efficient workflows in Vectorworks.
- Successfully delivered three comprehensive building inventory projects while balancing custom tool development.

Technical Artist

3ngage | 2024 - 2026

- Delivered high-end product animations by building fully custom, self-made fluid simulation pipelines for realistic water generation.
- Consistently delivered heavily optimized, topologically sound assets under strict production deadlines.

Technical Artist

Modus | 2022 - 2023

- Delivered complex rendering, shading, and model generation pipelines for high-end jewelry brands and luxury e-commerce platforms in the UK and Australia.
- Took the lead in mentoring and training two 3D artists, teaching them how to fully leverage Blender alongside my custom Python pipelines to maximize their efficiency and output quality.

EDUCATION

Bachelor of Architecture

Warsaw University of Technology | 2021 - 2026

- Founded and led "Blender Knights," a mentorship program where I taught numerous students how to use Blender from the ground up, earning the campus nickname "The Blender Guy."
- Led and coordinated multiple student teams in the creation of large-scale topographical and urban map projects.
- Discovered a strong passion for teaching complex technical skills, regularly mentoring peers in Unreal Engine 5, Rhino, Grasshopper, and advanced Blender mechanics.
- Utilized deep architectural knowledge to guide the structural integrity and realism of procedural asset generation tools.

TECHNICAL & LEADERSHIP SKILLS

Technical Mentorship	Pipeline Automation (n8n/Python)	Engine Architecture (C++/Vulkan)	Unreal Engine 5
Advanced Shader Math	Cross-Discipline Mediation		

SKILLS

3D Modeling, Sculpting & Texturing: Blender, Nomad, Mudbox, Houdini, Autodesk Maya, Quixel Mixer.
Engines & Rendering: Unreal Engine 5 (UE5), Unity, Godot, Vulkan API, OpenGL, V-Ray, Cycles, Eevee.
CAD, Architecture & Parametric: AutoCAD, Vectorworks, Revit, Rhinoceros 3D, Grasshopper, SketchUp, Archicad, Robot, Rmwin, Enscape, D5.
Development, Version Control & Automation: C++, Python, C#, HLSL, GLSL, SPIR-V, JavaScript, Git, GitHub, Docker, n8n, CMake, Visual Studio, VS Code.
Compositing, Video & Motion Graphics: DaVinci Resolve, Blender Compositor.
UI/UX, Web & 2D Design: Spline 3D, Affinity, Figma, Photoshop, Illustrator, Lightroom, CorelDRAW.
